Git

GitHub

Express

MongoDB

Full Stack Developer specializing in JavaScript, React, and Node. Self-educated engineer, highly adaptable to the ever-changing landscape of tech. Targeting Full Stack or Backend development roles.

### WORK EXPERIENCE

#### Rule Developer

(April 23, 2019 - Present)

Transcepta LLC

- Set up logic for automated extraction of key info from documents.
- Carry out programming tasks using vbScript, JavaScript, Regular Expressions, and MySQL.
- Built AutoHotKey and SQL scripts to speed up our team's internal processes.
- Volunteered to conduct onboarding and training of new team members. Became the sole trainer among the team, successfully training over 10 new employees.

#### Open Source Contributor

(June 17, 2022 - Present)

freeCodeCamp

- Contributing to freeCodeCamp's open source learning platform.
- Fixing bugs and making improvements to their lesson material.

### PROJECTS

#### Budget Snapshot Tool

- A web app that enables easy creation of a personal monthly budget.
- Allows the user to make changes and quickly visualize how their financial picture looks under different circumstances.
- Built with React and MaterialUI.

#### Bubble Note

- Note taking application built on the idea of categories flowing into subcategories.
- Main feature is that of Nodes. Nodes can contain pages and/or more Nodes. They can be nested to any depth.
- Uses Object Oriented Programming principles to keep track of the tree structure of the user's notes.
- Note: this is a work in progress. Progress can be viewed on Github.

#### Random Quote Generator / JS Calculator / Pomodoro Clock

- Projects built for freeCodeCamp's Front End Development Libraries certification.
- Making use of React and React Hooks, web APIs, and asynchronous functions.

### CERTIFICATES & EDUCATION

#### Responsive Web Design

freeCodeCamp
