TECHNOLOGIES

JavaScript	React
Node.js	Git
GitHub	Tailwind
HTML	CSS
SQL	Java
Express	MongoDB

Software Engineer specializing in JavaScript, React, and Node. Determined problem-solver, enthusiastic about writing human-friendly code that exhibits great clarity of thought. Looking to make an impact in a modern development organization.

WORK EXPERIENCE

Rule Developer
Transcepta LLC
(Apr 2019 - Present)

- Teaching our system to extract key info from documents in a wide variety of formats.
- Performing programming tasks using vbScript, JavaScript, Regular Expressions, and MySql.
- Volunteering to train new team members. Becoming the sole onboarding coach, training over 10 employees in the span of two years.
- Producing internal learning resources, enabling more efficient ramping up of new hires and enhancing quality of work across the team.

Open Source Contributor
freeCodeCamp
(Jun 2022 - Present)

- Contributing to freeCodeCamp's open source learning platform.
- Fixing bugs and making improvements to their lesson material.

PROJECTS

BubbleNote
My aim with this project is to construct a note-taking experience, based on a tree structure of categories branching into subcategories, which feels intuitive and eases the learning curve for newcomers to the practice of note-taking.

It's a work in progress, and current progress can be viewed on Github. It uses React for frontend logic, Tailwind for styling, and Object Oriented Programming principles to keep track of the user's notes.

Budget Snapshot Tool
A web app, built with React and MaterialUI, that enables easy creation of a personal monthly budget. Allows the user to make changes and quickly visualize how their financial picture looks under different circumstances.

Project Euler
A series of difficult algorithm challenges. Solved first 25 problems and counting. Progress tracked on Github.
